

COMPUTER NETWORK SOLUTIONS FOR THE PACIFIC NORTHWEST SINCE 1981

*At Polar Systems, our mission is simple – maximum network performance – helping customers achieve greater productivity, reliability and security with an absolute minimum of downtime.*

With one of the largest install bases of local and wide area networks in all of Oregon and Southwest Washington, we strive to recognize the unique needs of every single client and provide a solution strategy tailored to each individual organization.

## Specialized Practices

We have structured our business approach into a small number of specialized practices: Network Infrastructure, PolarStar Network Services and Application Solutions. The purpose is simple: to maximize our expertise and capabilities in a few core strategic areas, instead of trying to be a “jack of all trades.”

## Solution Design

At Polar Systems, we believe that technology solutions are not a commodity. Our technical consultants specialize in designing customized solutions to meet your specific business needs. Without guidance throughout the design and implementation process, it's difficult to realize the desired return from your IT investments. Our engineers identify the unique features of each client organization and custom-design solutions that will help control costs and increase payback. The result is an unparalleled level of personalized service and outstanding business relationships.

## PolarStar™ Network Services

Businesses and non-profit organizations everywhere are becoming increasingly reliant on technology for mission-critical tasks, and taking a reactive approach to network planning and support just isn't acceptable any more. With PolarStar Network Services from Polar Systems, our clients get the benefits of a full-time IT staff, guarding against data loss, enhancing reliability and maximizing system performance.

Our clients enjoy the protection of regular check-ups from a qualified technician for scheduled maintenance, backups, software updates and security enhancements. PolarStar provides 24/7 system monitoring and even remote management to help detect, diagnose and correct vulnerabilities. It is the most proactive, cost-effective approach to network management, enlisting a highly skilled staff that's always abreast of the latest technologies to handle your network management issues.

## Network Infrastructure

The Network Infrastructure group is comprised of industry-certified engineers, with expertise in data networking, VoIP, security, storage and disaster recovery solutions.

Our partnerships allow us to leverage our in-house technology and expertise with the resources of leading software and hardware manufacturers to deliver network solutions that are truly client-focused.

- Charter member, Microsoft Certified Partner Program (Gold Level)
- First Novell Platinum Level Partner in Oregon
- Cisco Premier Partner and Certified VPN / Security Specialist / VoIP Specialist

## Application Solutions

Polar Systems offers a variety of software solutions to improve productivity, efficiency and accountability. We offer business solutions for almost every industry, with particular emphasis on cost-effective integrated systems

for discreet manufacturing, inventory management and distribution. Polar Systems has been recognized by *Accounting Technology* magazine as one of the top 100 business applications providers in the country. We deliver a unique combination of application expertise and accounting experience, helping clients implement powerful and versatile software products. Our solutions include Microsoft's [Dynamics™ GP](#), a powerful ERP platform that employs web services to run business tasks on the Internet, and [AccountMate®](#), an award winning, highly-modifiable accounting solution.

Because of our non-profit experience, Polar Systems is also a direct manufacturer representative for Blackbaud®, a leading provider of financial tools for non-profit organizations. We deliver consulting and implementation services for [The Financial Edge](#), Blackbaud's flagship financial management solution, and its integration with [The Raiser's Edge](#), the company's industry-leading fundraising software.

*To schedule an appointment with a Polar Systems consultant to discuss your technology solutions, please contact Tim Tragesser, Business Development Manager, at 503-775-4410 x106.*
